# Weekly Status Report 2

## Week of 15.09.2025-05.10.2025 - 18 hrs

**Report**: Assess existing Virtual try-on models [both commercial and non-commercial]

### Works:
- Setting up GCP cloud commuting
- Config LoRA workflow
-Train lora
-Set up parameters

### Basic information

Name: instance-20250926-124146l
Type: Instance
Status: Stopped
Location : asia-east1-c
Boot disk source image: windows-server-2025-dc-v20250913
Boot disk architecture: X86_64
Boot disk license type: PAYG (Pay-as-you-go)
Instance template: None
Physical host: None

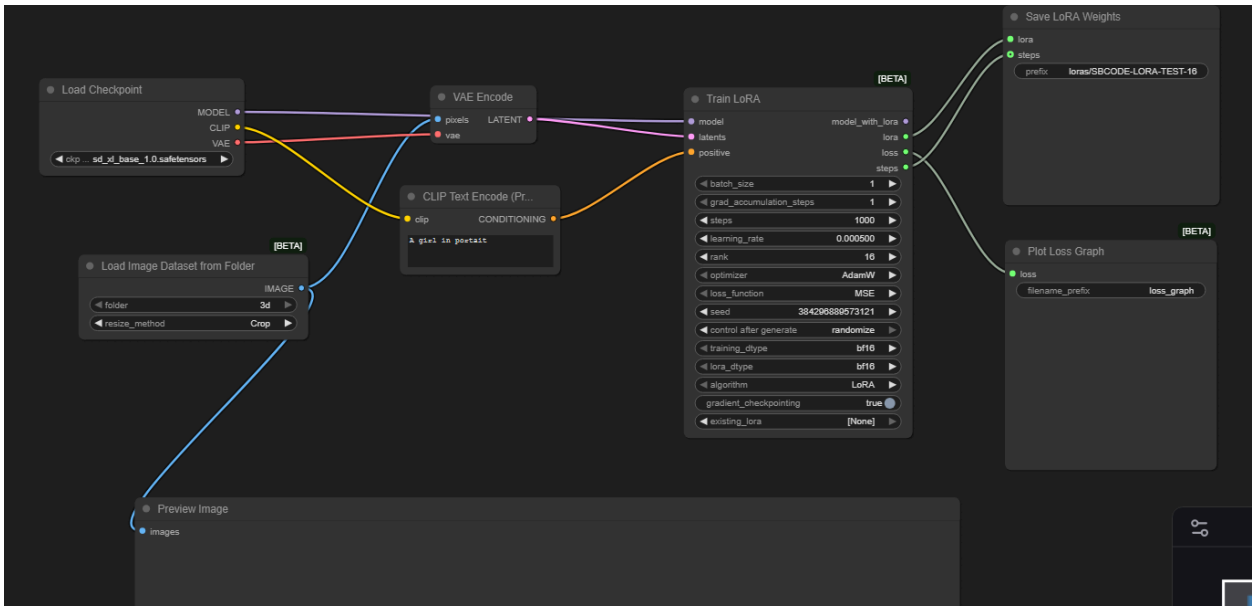
### Machine configuration

Machine type: custom-6-26624 (6 vCPUs, 26 GB Memory)
CPU platform: Unknown CPU Platform
Architecture: x86/64
GPUs: 1 x NVIDIA T4

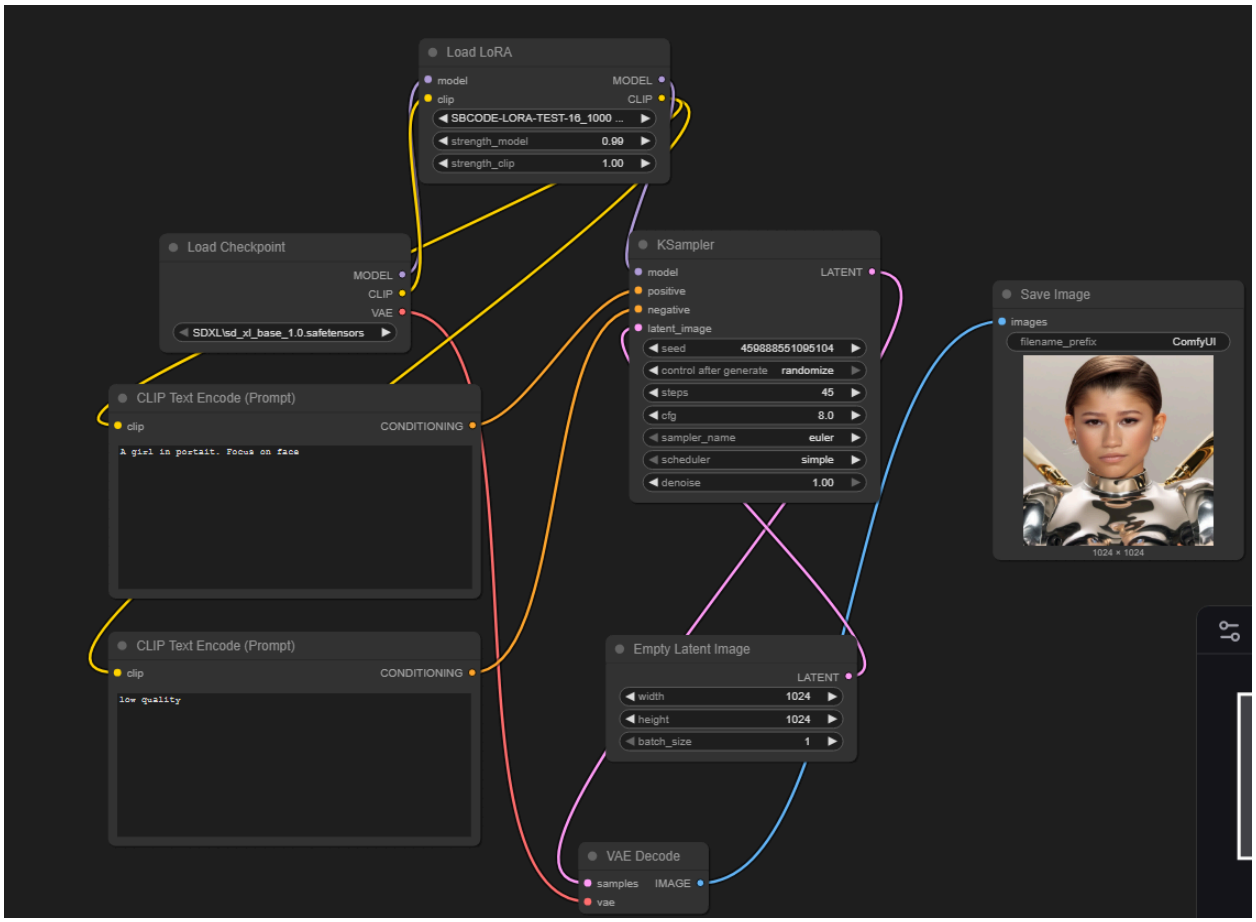
#### How to Set up

1. VM instance> click to our VM> Edit> Machine configuration> select GPUs > Machine type custom>  6 vCPUs and 26 GB
2. Boot disk> Image > Window system 2025 data center
3. Quotas & System Limits > search for NVIDIA T4> request 1 GPU to our predefined region

## LoRA on ComfyUI



**Workflow structure for training**



**Workflow for executing LoRA model (output)**

### ✅ Completed:
- Comfy UI LoRA training
- Comfy UI LoRA visualization
- Add GPU on machine configuration

### 🔄 In Progress:
- Pending GPUs quota request
- Refining LoRA face details

### ⚠️ Blockers:
- region in ais-southeast-b is not available for NVIDIA

### 📅 Next Week:
- Run COMFY ui AND TRAIN LoRA workflow
- Refine face details and test Yidan model suggestion

### 💡 Notes:
- The current plan of our GPU and CPU is pretty low speed, once we got GPU the server should be faster according to RAM
